

Bilingual AI Receptionist

Emirati Arabic + English | UAE Demo Specification

DEMO PURPOSE

A polished voice-agent demonstration designed for UAE businesses. The receptionist answers calls naturally, understands the caller, switches between Emirati Arabic and English, completes routine front-desk tasks, and hands complex situations to a human.

24/7 Call answering	2 languages Arabic + English	1 workflow Booking to CRM
Natural Conversational voice	Instant Language switching	Safe Human escalation

DEMO POSITIONING

A receptionist that sounds local, stays professional, and can actually complete the next step.

Built for clinics, hospitality, real estate, automotive, home services, salons, professional services, and other UAE businesses that depend on phone enquiries and appointments.

What the demo should prove

The goal is not only to sound human. The agent should complete useful front-desk work during the call.

Core capabilities

- Answer inbound calls with a branded greeting and a natural UAE-appropriate tone.
- Automatically detect whether the caller is speaking Arabic or English.
- Speak professional Emirati Arabic with a natural Gulf/UAE style rather than formal textbook Arabic.
- Switch between Arabic and English during the same call without restarting the conversation.
- Understand the caller's intent: enquiry, appointment, reschedule, cancellation, pricing question, location, working hours, or urgent request.
- Collect the caller's name, mobile number, preferred time, service needed, and any relevant notes.
- Check available appointment slots and create, move, or cancel a booking.
- Answer approved FAQs using the business knowledge base.
- Transfer to a human when the caller asks for a person, the request is sensitive, or the agent is uncertain.
- Log the conversation summary and outcome to the CRM or lead system.

Voice behaviour

Emirati Arabic	English	Both languages
Warm UAE/Gulf delivery	Clear professional English	Instant language detection
Polite local phrasing	Neutral international accent	Mid-call switching
Natural pauses	Natural turn-taking	Same customer context
No excessive slang	Easy to understand	No repeated questions

Important demo rule

The receptionist should never pretend to know information that is not in the approved business knowledge base. When confidence is low, it should ask a short clarification question or transfer the call.

Live call flow

A simple, believable flow that demonstrates intelligence without making the experience feel scripted.

1	Answer + identify language	Pick up quickly, greet the caller, and detect Arabic or English from the first response.
2	Understand the reason for calling	Ask one concise question and identify whether the caller wants information, a booking, a change, or human support.
3	Complete the task	Use the approved business data and connected tools to answer, qualify, book, reschedule, cancel, or capture the lead.
4	Confirm details	Repeat only the key details: service, date/time, location if relevant, and caller contact number.
5	Close naturally	Confirm the next step and end with a short professional goodbye in the caller's language.
6	Post-call action	Save a call summary, lead details, appointment result, and escalation note to the CRM or dashboard.

Human handoff triggers

- Caller explicitly asks for a staff member.
- Payment dispute, complaint, medical/legal-sensitive issue, or other configured sensitive topic.
- Repeated misunderstanding after a defined number of attempts.
- VIP or high-value lead rule is triggered.
- Emergency or urgent request matches the business escalation policy.

Demo moment to showcase

Have one test caller begin in English, switch to Arabic halfway through the call, then switch back to English for the booking confirmation. The agent should preserve context and never ask for the same information twice.

Sample demo call - English

Scenario: a customer calls a clinic to ask about availability and book an appointment.

AI RECEPTIONIST

Good afternoon. Thank you for calling Al Noor Clinic. How can I help you today?

CALLER

Hi, I want to book a dental cleaning for tomorrow.

AI RECEPTIONIST

Of course. I can help with that. Do you prefer a morning or evening appointment?

CALLER

Evening, after 6 if possible.

AI RECEPTIONIST

I have 6:30 PM and 7:15 PM available tomorrow. Which one would you like?

CALLER

6:30.

AI RECEPTIONIST

Perfect. May I have your name and mobile number for the booking?

CALLER

Ahmed, 050 123 4567.

AI RECEPTIONIST

Thank you, Ahmed. Your dental cleaning is booked for tomorrow at 6:30 PM. You will receive a confirmation message shortly. Is there anything else I can help you with?

CALLER

No, that's all.

AI RECEPTIONIST

You're all set. Thank you for calling Al Noor Clinic. Have a great evening.

What the client should notice

The agent keeps the conversation short, asks only necessary questions, offers real slot choices, confirms the appointment, and closes naturally without sounding like an IVR menu.

Sample demo call - Emirati Arabic

Scenario: the caller asks for an appointment in a polite, conversational UAE style.

المساعد الذكي

مرحبا الساع، حياك الله في عيادة النور. شلون أقدر أخدمك اليوم؟

المتصل

مرحبا، أبغي أحجز موعد تنظيف أسنان باچر.

المساعد الذكي

أكيد، حاضر. تفضل الموعد الصبح ولا المساء؟

المتصل

المساء، عقب الساعة ست إذا ممكن.

المساعد الذكي

تمام. عندي ست ونص وسبع وربع باچر. أي واحد يناسبك؟

المتصل

ست ونص مناسب. اسمي أحمد ورقمي صفر خمسة صفر، واحد اثنين ثلاثة، أربعة خمسة ستة سبعة.

المساعد الذكي

تم يا أحمد. حجزك باچر الساعة ست ونص لتنظيف الأسنان، وبنرسل لك رسالة تأكيد. حياك الله، وفي أمان الله.

Dialect target

Natural Emirati/Gulf phrasing, not exaggerated slang. The final production voice should be tuned with approved greetings, vocabulary, pronunciation, and business-specific terminology.

Bilingual switching in one call

The key UAE demo feature: language changes without losing context.

AI RECEPTIONIST

Good evening. Thank you for calling Horizon Properties. How can I help?

CALLER

I am calling about a two-bedroom apartment in Dubai Hills.

AI RECEPTIONIST

Certainly. Are you looking to rent or buy?

Caller

إيجار. وأبغى أعرف إذا الشقة متوفرة هالأسبوع.

المساعد الذكي

أكيد. الشقة متوفرة للمعاينة هالأسبوع. تفضل المعاينة الصباح ولا المساء؟

CALLER

Evening is better. Can you book Thursday at 7?

AI RECEPTIONIST

Yes. Thursday at 7:00 PM is available. I will book the viewing and send the confirmation to your mobile number.

Behind the scenes

- One conversation memory: details collected in English remain available after switching to Arabic and vice versa.
- Business vocabulary: property names, doctor names, services, locations, and product terms can be added to a pronunciation list.
- Fallback: if speech is unclear, the agent asks a short clarification instead of guessing.
- Optional confirmation channel: WhatsApp or SMS can be sent after the call with the appointment or lead details.

Sales message for the demo

The value is not "an Arabic bot". The value is a front desk that can serve both Arabic-speaking and English-speaking customers on the same number, at any time, with a consistent process.

Demo integrations and actions

Connect only what is needed to prove the workflow. The demo should feel complete, not overloaded.

Connection	What it demonstrates
Phone number	Receives the inbound call and presents the AI receptionist as the first line of response.
Calendar / booking system	Reads availability and creates, reschedules, or cancels appointments.
CRM / lead pipeline	Stores caller details, call summary, service interest, outcome, and follow-up status.
Knowledge base	Provides approved answers for services, pricing ranges, opening hours, location, policies, and FAQs.
WhatsApp / SMS	Sends appointment confirmations, directions, links, or next-step messages.
Human transfer	Routes the live call to the correct employee, department, or on-call number when required.

Recommended demo data

- 10-15 FAQs with approved answers.
- 3-5 services with short descriptions.
- Opening hours, address, parking/location guidance, and holiday rules.
- A test calendar with realistic appointment slots.
- One human transfer number for escalation.
- A simple CRM pipeline: New Call > Qualified > Booked > Follow-up > Escalated.

Guardrails to include

- Do not invent prices, availability, policies, or promises.
- Do not collect card details or unnecessary sensitive information in the demo.
- Repeat critical details such as appointment time before final confirmation.
- Escalate when confidence is low or the caller requests a human.

Demo runbook

A 5-7 minute client demonstration that clearly shows value.

- 01 Opening** - Show the phone number and explain that no app is required - the customer simply calls.
- 02 Test 1 - English** - Ask about a service, request availability, and book an appointment.
- 03 Test 2 - Emirati Arabic** - Call again in Arabic and ask for opening hours plus a booking change.
- 04 Test 3 - Switch language** - Begin in English, change to Arabic, then return to English for confirmation.
- 05 Test 4 - Human handoff** - Ask a question outside the approved knowledge base and show the escalation path.
- 06 Dashboard proof** - Show the saved caller details, call summary, booking result, and follow-up action.
- 07 Close** - Explain how the same workflow is customized for the client's business, vocabulary, hours, services, and staff.

Acceptance checklist

- | | |
|--|--|
| ☐ Arabic sounds natural and locally appropriate. | ☐ English voice is clear and professional. |
| ☐ Language detection works without menu prompts. | ☐ Mid-call language switching keeps the same context. |
| ☐ Booking action completes correctly. | ☐ Names and phone numbers are captured accurately. |
| ☐ FAQ answers stay within approved information. | ☐ Human transfer works when triggered. |
| ☐ CRM or dashboard receives a clean call summary. | ☐ Caller receives the expected confirmation message. |

Final demo promise

A bilingual AI receptionist that can answer, understand, act, and escalate - with a voice experience built for UAE customers in both Emirati Arabic and English.

Prepared as a client-facing demonstration concept for Raqmiva.
